

Is Your Business Prepared?

Toll-Free Disaster and Recovery

Protecting your business-critical, toll-free numbers from failure is essential to your operations. A down number results in missed sales opportunities and an inability to serve your customers. It affects customer confidence, your reputation, and your revenue.

Plan For:

- Network malfunction
- Cut cables
- Equipment failure
- Power outages

If you are relying on a single carrier for your toll-free telephone

services, outages are inevitable. Disaster and recovery planning is essential to protecting you from loss of business.

Toll-free numbers and multi-carrier routing offer a full-proof, simple and cost-effective method for your disaster recovery plan.

Planning for Disasters

With O1 managing your toll-free service, you can:

- Keep your current carrier
- Add an additional carrier for backup
- Split your traffic among three major carriers

Regardless of carrier, as your designated RespOrg, O1 builds carrier diversity into the routing of each toll-free number. If one carrier has an issue, we can route it to another network, eliminating carrier outage issues. We work with you to identify the optimal multi-carrier routing options, so when disaster strikes, you are protected.
